## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement (IDS) submitted on 6/11/2003 has been considered and placed in the application.

### ***Amendments & Remarks***

2. Applicant's remarks and amendments filed 11/12/2003 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Anspach, III et al. (5,725,541). Anspach, III et al. disclose a bone anchor including a cone-shaped head (23) having a wide end, a narrow end, three cutting edges defined by triangular side surfaces and a collar member (3) coupled to the head to secure the bone anchor in the bone (figures 1-13, col. 4, line 14 to col. 7, lines 42). Although, Anspach, III et al. does not disclose the triangular side surfaces being outwardly curve, it would have been obvious matter of design choice to modify the Anspach, III et al. reference by having the triangular side surfaces being outwardly curve, since applicant

Art Unit: 3731

has not disclosed that having outwardly curved surfaces solves any stated problem or is for any particular purpose and it appears that the cutting edges of a bone anchor would perform equally well with either outwardly curved surfaces or planar surfaces that define them.

5. Claim 30 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pietrzak et al. (5,527,342). Pietrzak discloses a bone anchor including a spear member (12) in form of a generally cone-shaped head having a wide end, a narrow end and a collar member coupled to the head to secure the bone anchor in the bone (figs. 1-7, col. 4, line 48 to col. 6, line 62). Although, Pietrzak's spear member does not have at least two cutting edges defined by one or more surfaces, it is well known in the art (see the previous cited arts which have cone-shaped cutting head and cutting edges and the cited art attached) that a spear head or a cone-shaped cutting tip have sharp cutting edges defined by one or more facets or surfaces in order for the spear head/cutting tip to cut into bone more easily. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the spear member of Pietrzak by having cutting edges provide on the spear member in order for the spear member to cut into bone more easily.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 3731

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Brauer (5,951,543) disclose a spear tip with multiple facets formed beveled cutting edges coming together to form a pointed tip (col. 7, lines 51 to 67).
